Introduction

The **Print Document** tool allows you to produce hard-copies of documents created by other task steps. All standard printer properties are available to produce run-time-specific output.

Features

- ▶ Automated printing of documents
- ▶ Use of named **Printer Definitions** containing pre-configured printer settings
- ▶ Static and dynamic selection of printers
- ▶ Multiple documents printing to multiple printers
- ▶ Memory feature to memorise task data created at run-time

Technical Summary

Working with other Tools

The **Print Document** tool can directly interact with the following tools:

Consuming from Other Tools

The **Print Document** tool can consume objects outputted from the following tools:

Icon	Tool Name	Tool Category
	Create Workflow Job	Format
	Format as Flat File	Format
	Format as Text	Format
	Run Crystal Report	Format
	Run Microsoft Reporting Services	Format
	Run Microsoft Word (Merge)	Format

Objects Consumed

The following objects outputted by the above tools can be directly consumed by a **Print Document** step:

- ▶ **Documents (Text)** — Plain text documents

Exposing to Other Tools

As an Output category tool, **Print Document** does not expose any objects that can be directly consumed by another tool. However, it does expose the following objects which can be used in a task step sequence:

- ▶ **DocumentSource** — Displays the data provided by the previous step in the task

- ▶ **Step Properties** — Standard step properties are available allowing you to use statistical data of the tool

Prerequisites

Before you can use the **Print Document** tool, you must have a valid and working printer driver installed on the BPA Platform machine.

NOTE: At the time of writing, those drivers that output to a file, for example, Microsoft XPS Document Writer, are unsupported as they use confirmation dialogs which are outside of the **Print Document's** interface.

Global Configuration

The **Print Document** tool does not require any global configuration before being used in a task step.

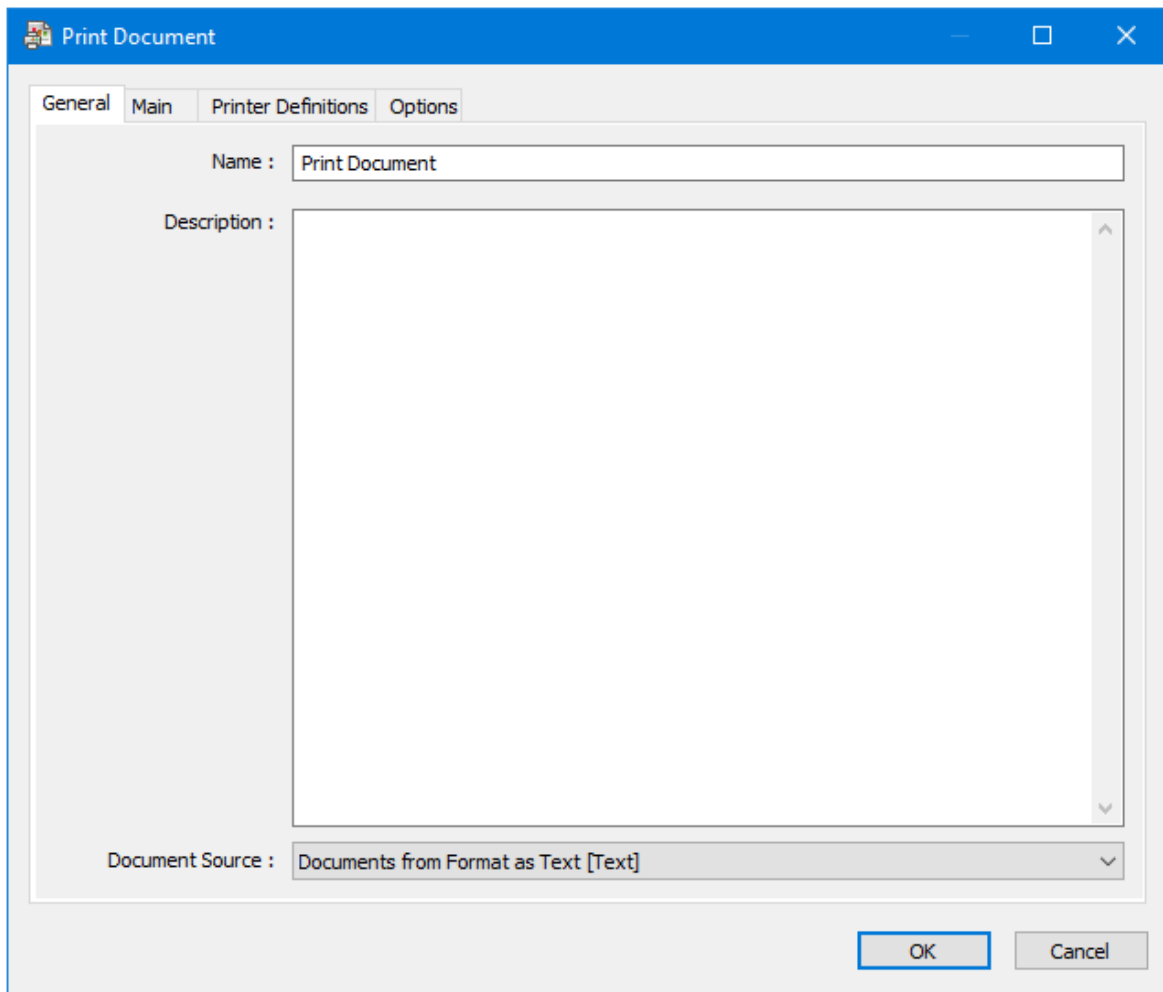

Step Configuration

To add a new **Print Document** step to an existing task, you either:

- ▶ Click and drag the **Print Document** icon from the **Task Browser** to the task **Design** area.
- ▶ From the task's **Design** tab, right-click on empty space and select **Add > Output > Print Document**.

For a detailed description of how to create new tasks, refer to the product help.

About the General Tab

The image shows a screenshot of a software dialog box titled "Print Document". It has a blue header bar with standard window controls (minimize, maximize, close). Below the header is a tabbed interface with four tabs: "General", "Main", "Printer Definitions", and "Options". The "General" tab is currently selected. Inside the "General" tab, there are three main fields: a "Name" text box containing "Print Document", a "Description" text area which is empty, and a "Document Source" dropdown menu showing "Documents from Format as Text [Text]". At the bottom right of the dialog are "OK" and "Cancel" buttons.

The **General** tab is used to enter the following details for the step:

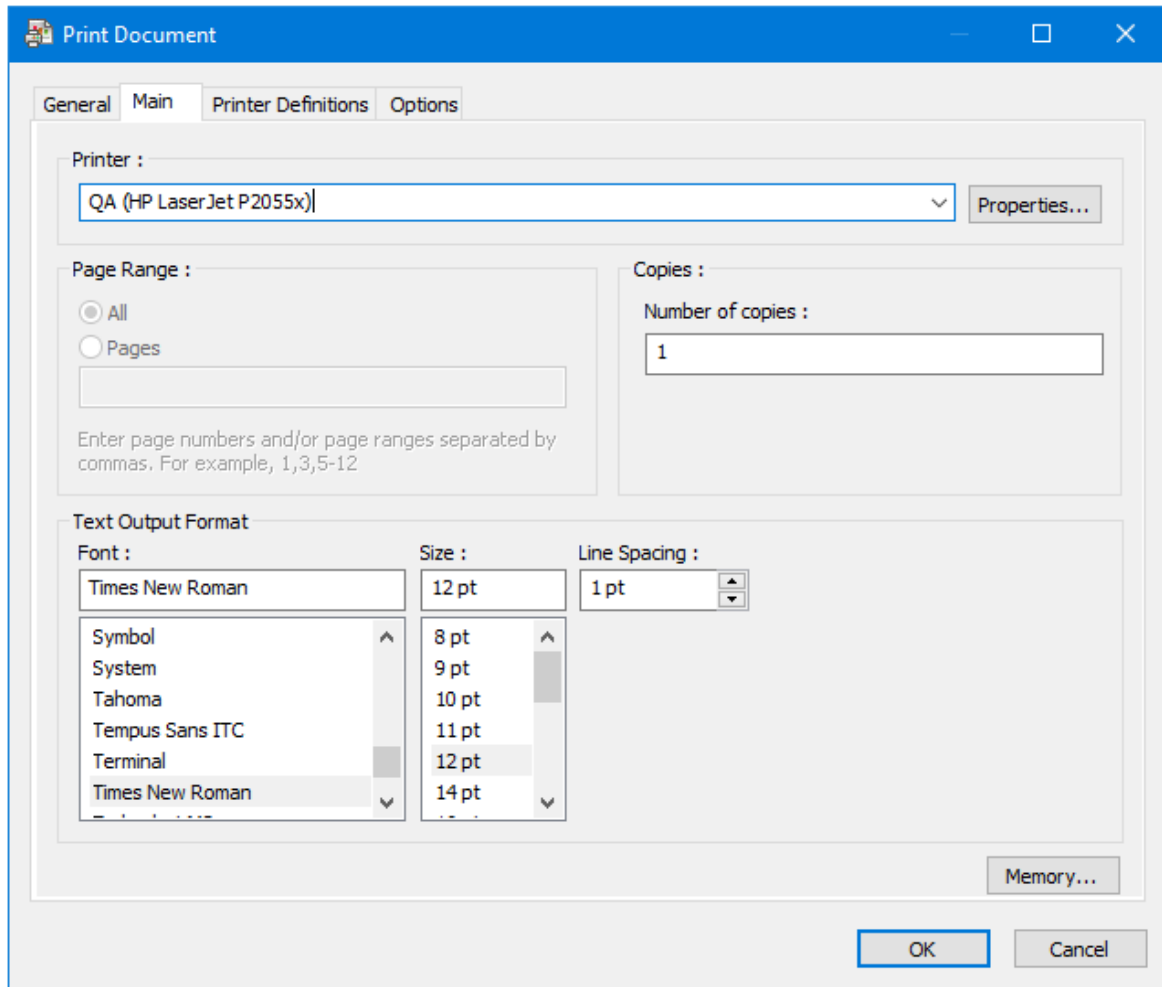

- ▶ **Name** — Enter a meaningful name for the step

TIP: If this task instance makes use of two or more **Print Document** steps, ensure the **Name** used is unique for each individual step.

- ▶ **Description** — If required, enter a description of this step
- ▶ **Document Source** — All available documents from previously created task steps are listed here — for a list of those tools that can supply documents for this step, see [Technical Summary](#)

About the Main Tab

Use the **Main** tab to select the printer for this task. You can also set the text format of the output

The **Main** tab contains the following:

- ▶ **Printer** — Available printers and [printer definitions](#) for this tool. You can use variables and recordset data from the **Task Browser** dialog to dynamically select the printer at run-time.
- ▶ **Properties** — Use [Properties](#) to set specific printer settings for this output, such as paper size and orientation.
- ▶ **Page Range** — For internal use only.
- ▶ **Copies** — The number of copies of this particular document. You can use variables and recordset data from the **Task Browser** dialog to dynamically specify the number of copies.
- ▶ **Text Output Format** — You can choose the font formats of the printed document here.

- ▶ **Memory** — Use **Memory** to memorise some or all of the step output for use in other task steps. This is particularly useful when the **Print Document** step is called multiple times — use **Memory** to compare the document previously processed to the new document currently being processed to avoid duplicates.

Adding Printer Properties

You can use this dialog to adjust the properties of the selected printer ([Main](#) tab) or add a new printer definition ([Printer Definitions](#) tab).

QA (HP LaserJet P2055x)

Printer Definition :

Name : QA (HP LaserJet P2055x)

Printer : QA (HP LaserJet P2055x) Properties...

Settings :

Paper Size : A4 sheet, 210- by 297-millimeters

Paper Source : Automatically Select Orientation : Portrait

Quality : Draft Scaling : 100%

Collate : Collate

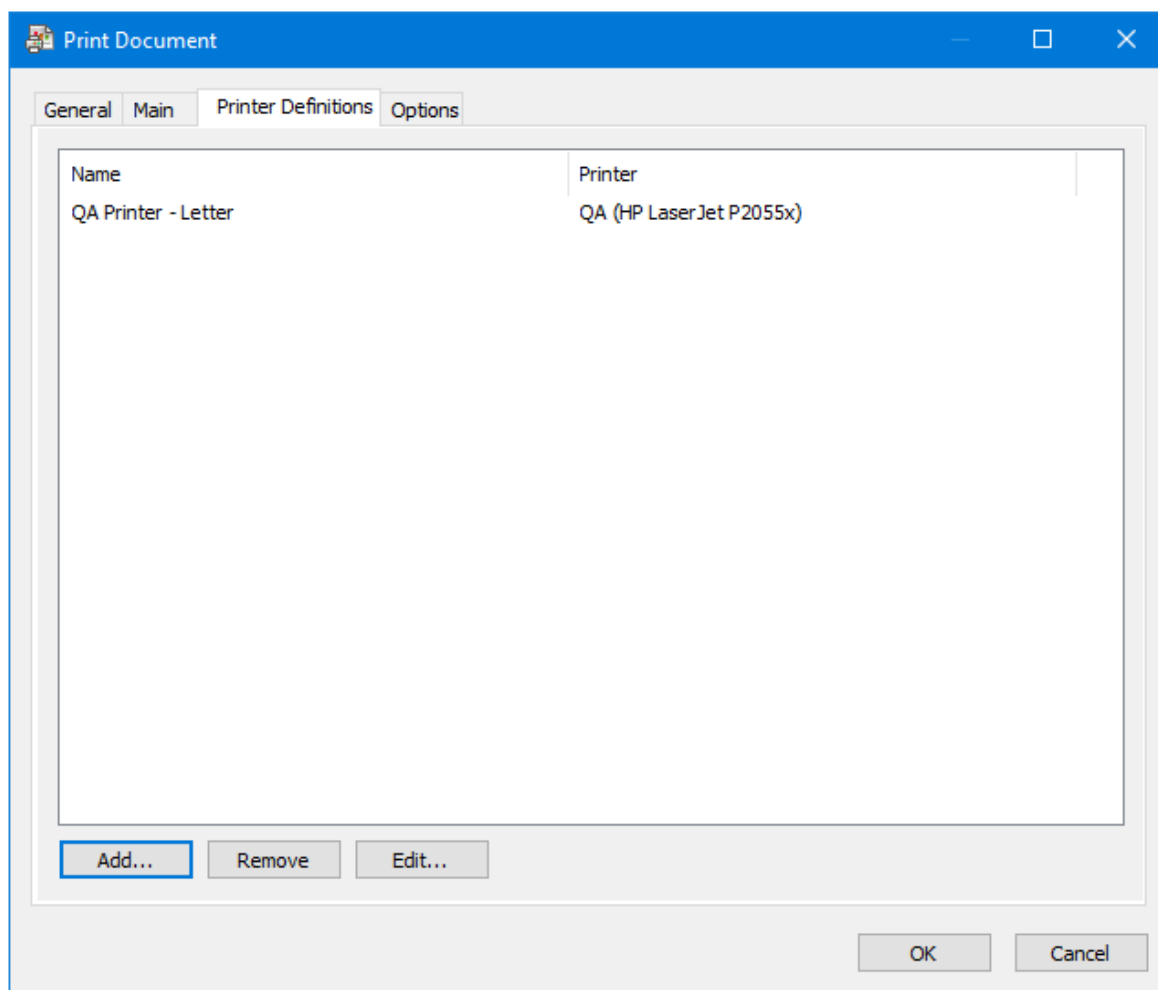

OK Cancel

You can configure the following:

- ▶ **Printer Definition**
 - ☐ **Name** — The **Printer Definition** name. If a standard printer driver has been selected instead of a printer definition, the printer name is used here instead.
 - ☐ **Printer** — The printer being used as defined by the operating system.
 - ☐ **Properties** — Use **Properties** to adjust the printer's driver settings.
- ▶ **Settings** — Universal printer settings.

About the Printer Definitions Tab

Printer definitions are named configurations of specific printer settings. These are local and private to the step they are created in and, at the time of writing, cannot be shared.

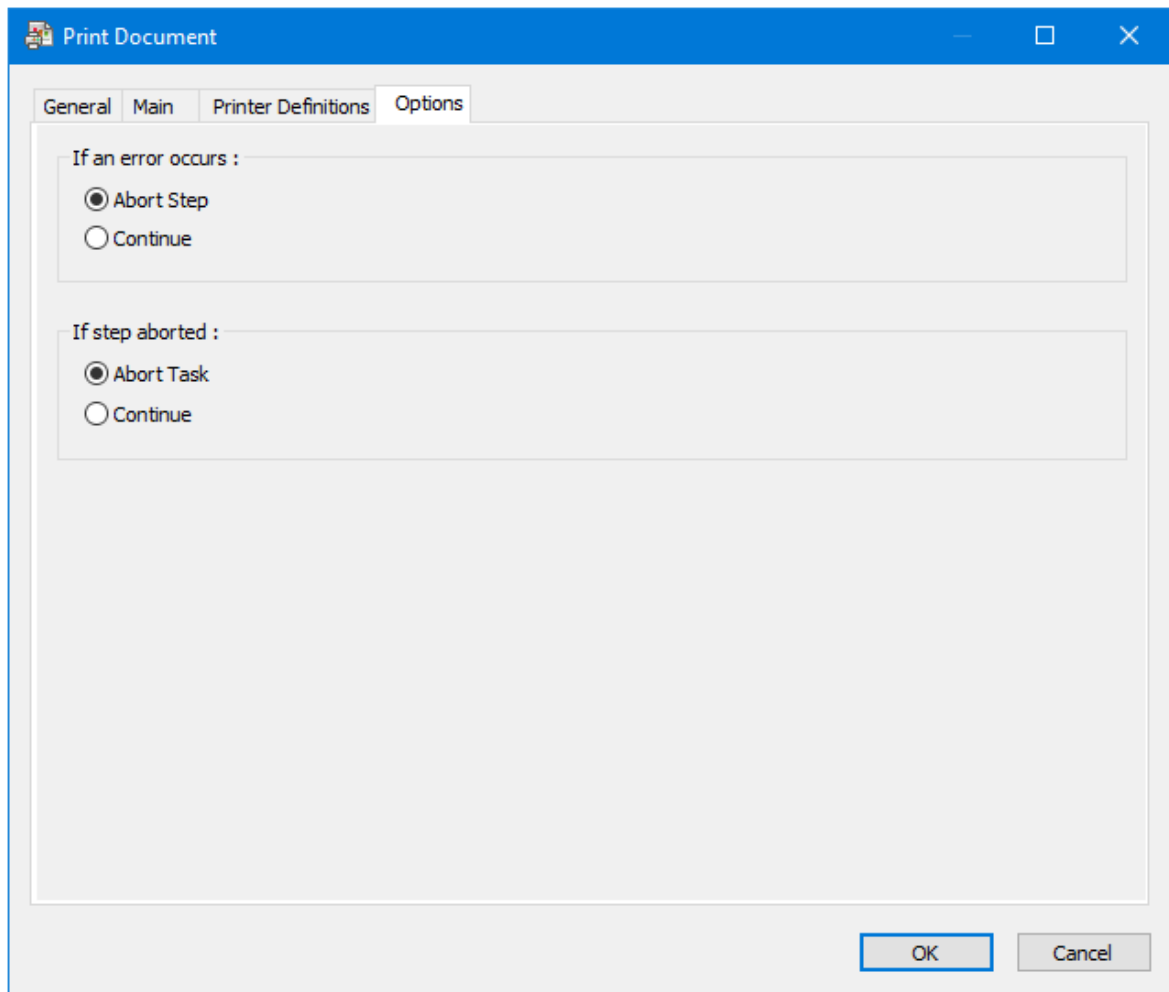

Use the **Printer Definitions** tab to define all possible printer configurations to use in the [Main](#) tab. Click **Add** to create a new using the [Printer Definition](#) dialog.

TIP: When adding new definitions, ensure BPA Platform has the correct access rights to the printer and the correct printer driver installed.

About the Options Tab

The **Options** tab allows you to define how errors in this step are handled at task runtime.

If an error occurs, you can decide whether the step should **Continue** processing, or terminate the step immediately (**Abort Step**).

If the step is aborted, you can choose to **Continue** processing onto the next step in the task, or terminate the whole task immediately (**Abort Task**).
